BoxOn Logistics Software

BoxOn Logistics is a logistics software which is innovatively being designed and developed after years of research on how to root out the complexities in tasks that are inherent in logistics industry. It is a cloud-based, rule-based software which is specifically built for the logistics companies which are on the lookout for efficiency in their logistics operations. It is a software which can help organizations in minimizing flaws and gain super-colossal benefits.

BoxOn, in simple words, is a software which is made to simplify the tasks and help organizations gain full control over everything related to their logistics operations.

BoxOn is dynamically a rules-based and cost-effectively a cloud-based solution for the logistics companies.

BoxOn Logistics is an innovatively rules-based and client-specific software which is first of its kind in the world of logistics. It is built with a focus on how to make it possible for the business owners to bring about the changes they require so as to move on perfectly well with their business operations. Ours is a rules-based software which can allow the business owners to introduce changes in their business tasks anytime they want to. Business owners have the opportunity to fully adapt to the changes which might take place in the way they carry out their business without actually re-programming or re-customizing the software. They can easily adapt to changes which ultrily mirror their requirements and overcome the challenges in their business.

Logistics companies now can have the opportunity to move on freely with no trouble at all by making use of our highly flexible, easy-to-use and highly customizable software to gain the level of efficiency they wish to in their business operations. It is simply the best for the freight forwarding companies, multi-carrier shipping tasks, warehouse management tasks etc.,

"At BOXON, our ultimate mission is to deliver rules-based, work flow specific software to our clients in the logistics industry, providing each with the best solution for their individual business"

Logistics has never been so functional

BoxOn International P.O. Box Software

BoxOn P.O. Software is world’s first true SaaS solution for all the clients who are looking forward to streamline their logistics tasks effectively enough to gain success in their business.

It makes it easier for the clients to track the packages online. No matter how many orders you may receive and how many goods are there to be delivered, you can easily keep the track of everything and move on seamlessly. You can have difficulty in keeping the track of goods being delivered to clients who are residing in other countries too. This software is specifically designed and developed to make it easier for the companies to receive the cargo directly from the carriers or to give out receipts for warehouse tasks, house waybills, air waybills and B/L etc.

With BoxOn P O Box, clients can easily enhance the efficiency level in their business and can let them get full control over everything from shipment processes to delivery processes, receipt generation, tracking of the goods, etc. The clients can view the information as they want and can alter anything they want. They have the option to view and store records too for future reference.

Operations Highlights

- Manage POBOX accounts
- Manage Tariff Accounts
- POBOX user online access
- Unknown package handling
- Detailed screening info
- Hold packages
- Alert incoming shipments
- Partial Shipment
- Release
- Convert multiple warehouse receipts to Inhouse
- Customer can see item images
- Customer can manage Item status
- Item level status and Tracking
- Automatic Shipment calculation
- Automatic Storage Charges Calculation
- Automatic Additional Charges Calculation
- Automatic Calculation of Agent commissions
- Automatic credit card processing

“This software is really adapted to the International PO Box, its reliability and stability are outstanding. It is a pleasure to work with them, they are always ready to consider new ideas development and improvement.”
